Experiment : 5

Date:

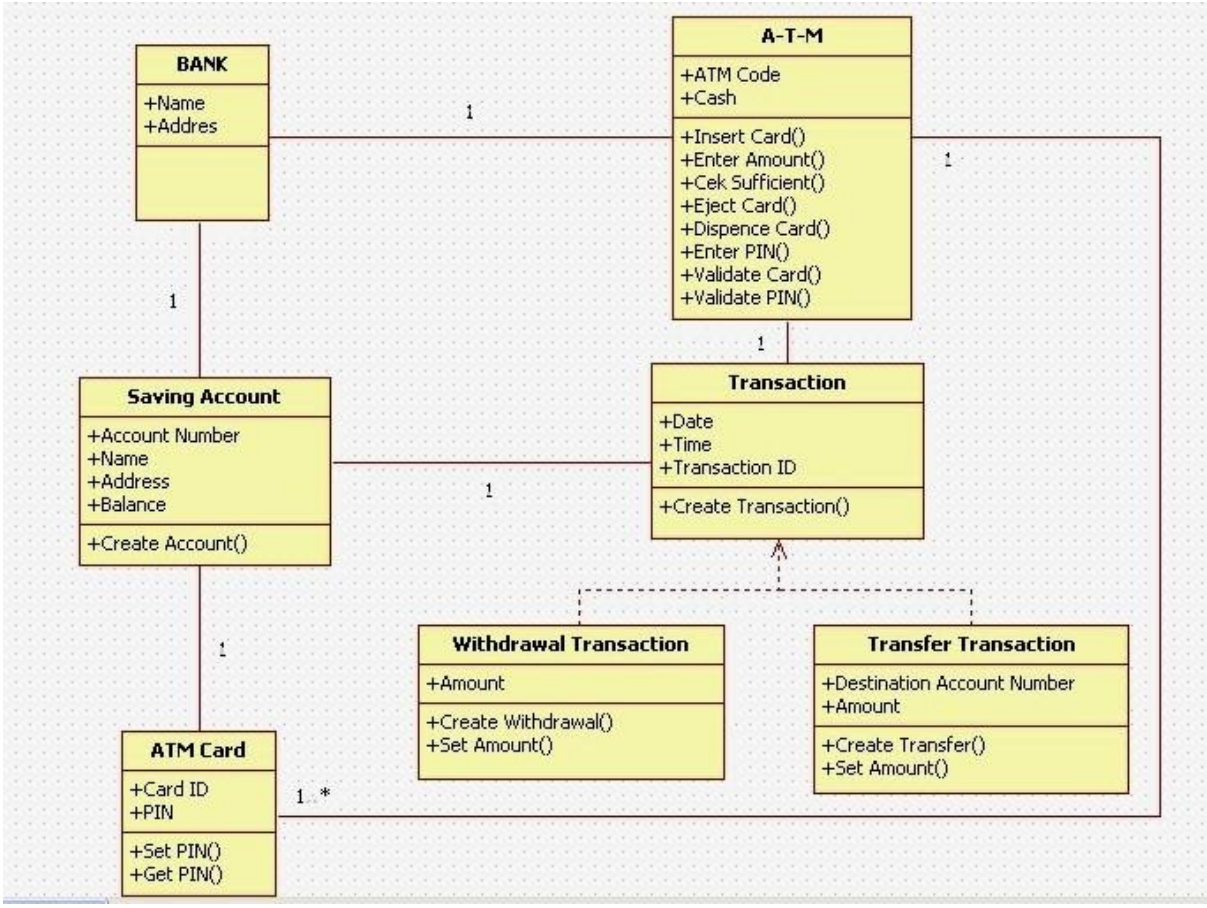
CLASS DIAGRAM AND TIME SEQUENCE

Aim:

To apply software engineering principles by implementing the class diagram and time sequence diagram

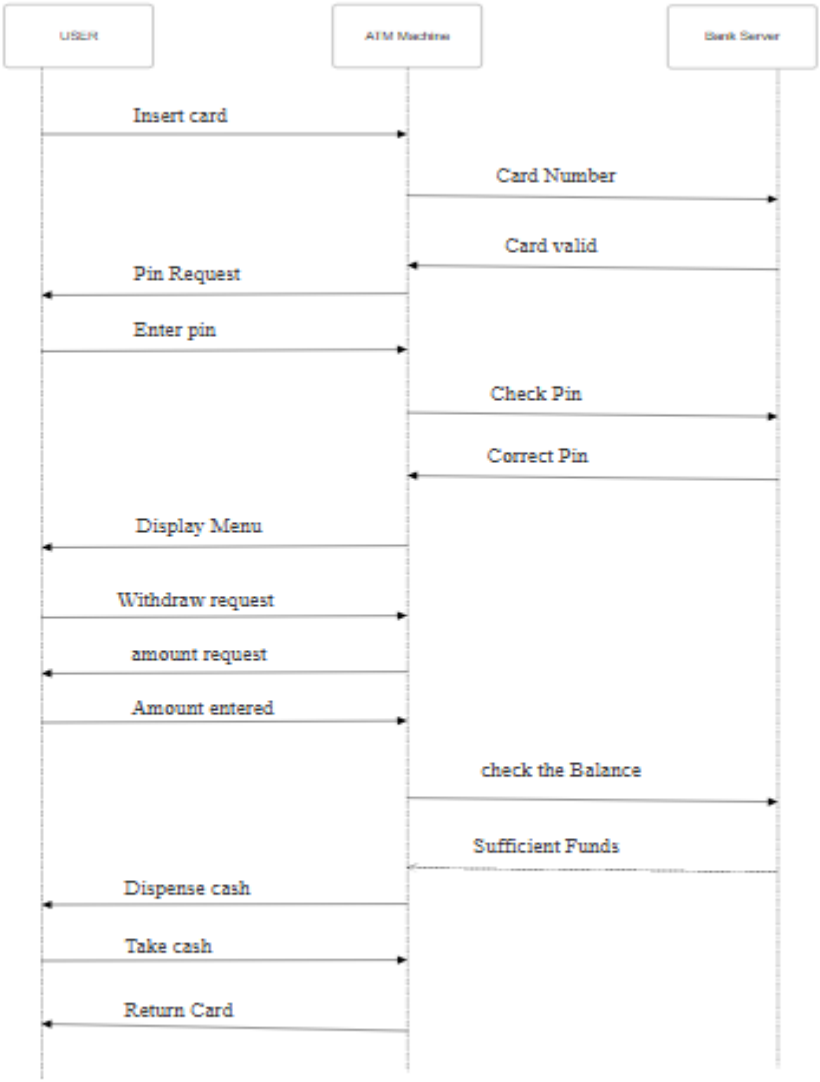
Class diagram

A UML class diagram shows the structure of a system by displaying its classes, their attributes, methods, and the relationships between them. It helps the team understand how the system is organized and how components interact**.**



Time sequence diagram

In software engineering, a sequence diagram shows process interactions arranged in time sequence. This diagram depicts the processes and objects involved and the sequence of messages exchanged as needed to carry out the functionality**.**



Conclusion:

This experiment proves that Software Engineering principles by designing these diagrams to represent system architecture and behavioral flow.
